DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show item 13 (the automatically controlled electronic door) as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: item number 13.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should

Art Unit: 3749

include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3, 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "the gas" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim 3 recites the limitation "the gas line" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 5 recites the limitation "the substances" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim 5 recites the limitation "the remaining liquid substances" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Claim 5 recites the limitation "the mixture" in line 5. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 3749

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Glennon (4133273). Glennon shows Introducing waste material into a storage chamber which allows the liquid to drain into a tank (treatment tank, fig. 1), b. Moving the waste to a condenser chamber where it is burned, (residue burner, fig. 1)c. Moving the emissions and dust to a cleaning and burning chamber where they are further condensed (afterburner).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cardinal (3623438) in view of Hadley (4949652). Cardinal discloses introducing waste material into a storage chamber which allows the liquid to drain into a tank (2, fig. 1), b. Moving the waste to a condenser chamber where it is burned, (9, fig. 1), the waste material in the storage chamber is moved to the condenser chamber by an escalator carrier (8, fig. 1). Cardinal discloses applicant's invention substantially as claimed with the exception of moving the emissions and dust to a cleaning and burning chamber where they are further condensed. Glennon teaches moving the

Art Unit: 3749

emissions and dust to a cleaning and burning chamber where they are further condensed (afterburner, fig. 1) for the purpose of removing pollutants form the exhaust gases. It would have been obvious to one of ordinary skill in the art to modify Cardinal by including moving the emissions and dust to a cleaning and burning chamber where they are further condensed as taught by Hadley for the purpose of removing pollutants form the exhaust gases so hat environmental regulations are met.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Glennon (4133273) in view of Homer et al (4846081). Glennon discloses introducing waste material into a storage chamber which allows the liquid to drain into a tank (treatment tank, fig. 1), b. Moving the waste to a condenser chamber where it is burned, (residue burner, fig. 1) c. Moving the emissions and dust to a cleaning and burning chamber where they are further condensed (afterburner). Glennon discloses applicant's invention substantially as claimed with the exception of the gas for burning the waste enters through the gas line and an ignition switch creates a spark to ignite the fire in the chamber. Homer et al teaches the gas for burning the waste enters through the gas line and an ignition switch creates a spark to ignite the fire in the chamber (col. 5, lines 8-10) for the purpose of starting the combustion process. It would have been obvious to one of ordinary skill in the art to modify Glennon by including the gas for burning the waste enters through the gas line and an ignition switch creates a spark to ignite the fire in the chamber as taught by Homer et al for the purpose of starting the combustion process so that the apparatus will function.

Art Unit: 3749

Allowable Subject Matter

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 5 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claim 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to sludges and waste disposal in general: Kunz et al (5271162), Hadley (4,949,652).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth B Rinehart whose telephone number is 571-272-4881. The examiner can normally be reached on 7:30 -4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ira Lazarus can be reached on 571-272-4877. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
